

Instruments deserve high-quality repair services from 30-year manufacturer.

With over 30 years in the aircraft instrument manufacturing industry, Castleberry Instruments & Avionics now provides repair and overhaul services for a wide variety of aircraft electronics and other manufacturers' gyro flight instruments, including AIM, S-Tec, Century Flight, Bendix and others. Rotor repair and overhaul are highly regarded specialty services.

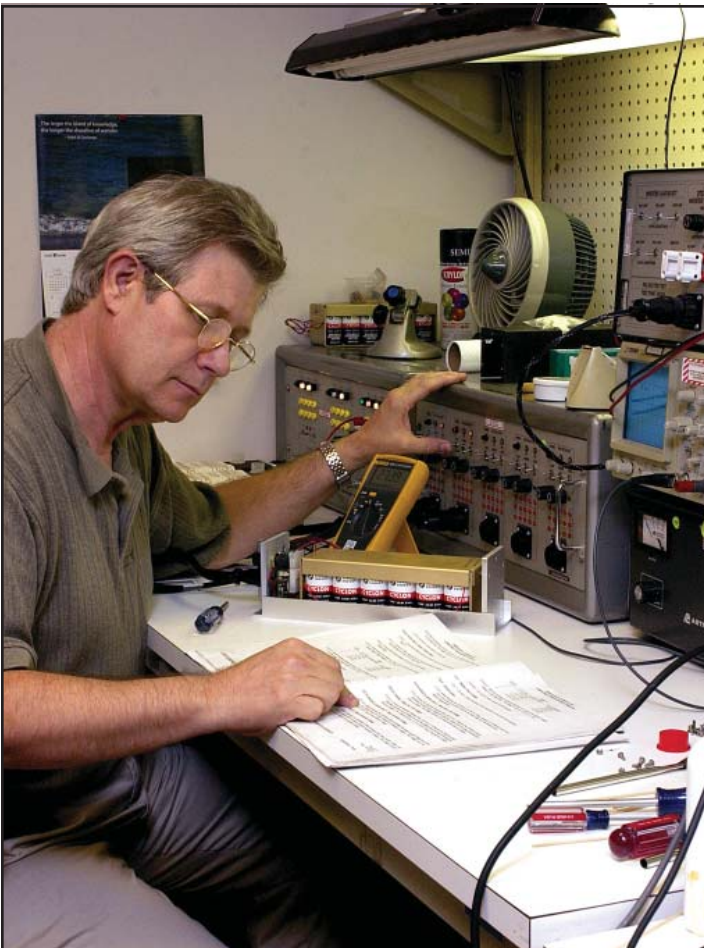

Repair services at Castleberry embody a 50-year heritage of flight instrument manufacture and repair excellence guided today by a core of dedicated and highly skilled employees with an average of more than 20 years experience in manufacturing and repairing aircraft instruments.

Castleberry is service. It isn't just component service, but a sincere focus on customer service. It has always been that way, and customers expect more focus on service than ever before. The company's focus is on customers, for instruments and for service.

Castleberry also offers a premier warranty program for its gyro rotor repair and overhaul service. The company now offers an expanded 12-month warranty for vacuum and electric gyro rotors overhauled for General Aviation applications. The warranty is 90 days for repaired rotors.

Castleberry also manufactures aircraft flight instruments and electronic components for the General Aviation and Corporate Aircraft industry. It produces FAA approved and TSO'd products that replace some older, obsolete instruments no longer manufactured elsewhere. These new units are approved for those previously manufactured by AIM, Century Flight, Bendix and others when installed by FAA approved installers. Castleberry units fit the same panel cut out, use the same mating connectors and perform the same function as many gyros of previous manufacturers. Installation of these units is straight forward.

For more information on repair services and fine products from Castleberry, please call 512-251-5322.
