FOR IMMEDIATE RELEASE:

Castleberry signs dealer agreement for Australia and the Pacific Rim.

Austin, TX – July 16, 2007 – Because of increased international popularity of its new flight instruments, Castleberry Instruments and Avionics has entered into a dealer agreement with Complete Avionics at the Coolangatta Airport, Tugun, Queensland, Australia. The new dealer agreement is effective immediately and provides a distribution arrangement for its products throughout the Pacific Rim.

Greg Clark, director of Complete Avionics said, “With over fifty years of combined avionics experience, our staff of dedicated professionals believe that the team approach is the best in solving avionics problems and needs. With the addition of Castleberry components to our team of fine suppliers, we provide aviators in our area the best options in avionics and instruments service and installation.”

The popularity of Castleberry components includes a proven back up electric artificial horizon, air driven and electric directional gyros and horizons for fixed wing and helicopter operations as well as emergency power units and inverters for general aviation.

“We are excited about this new expansion opportunity”, said Alex Hodge of Castleberry. “Castleberry believes that this agreement is of increased benefit to international operators because it places our products in the hands of trusted aviation champions in the geographic regions they serve. Our customers should expect to see additional similar agreements to come.”

New Castleberry units are FAA approved and TSO'd as replacements for previously popular lines of components, including those previously manufactured by AIM, Century Flight and Bendix. Castleberry units fit the same panel cut out, use the same mating connectors and perform the same function as gyros of previous manufacturers. Installation of these units is straight forward.

The gyros manufactured by Castleberry embody a 50-year heritage of quality and reliability. Therefore, new Castleberry gyros for general aviation carry a 15-month warranty policy.

Castleberry Instruments and Avionics is an Austin, Texas manufacturer and repair facility of aircraft flight instruments and electronic components for the General Aviation and Corporate Aircraft industry. Repair and overhaul services of gyroscopic aircraft instruments is a specialty. With more than 30 years in the industry, the highly respected company produces FAA approved and TSO'd replacement products for many older, obsolete instruments no longer manufactured elsewhere.
