FOR IMMEDIATE RELEASE:

Castleberry signs new dealer agreement for South America.

Austin, TX – July 20, 2007 – As popularity and demand grows for its new flight instruments in Latin America, Castleberry Instruments and Avionics has entered into a dealer agreement with Redimec s.r.l. of Argentina. This dealer agreement is effective immediately and provides a distribution arrangement for Castleberry products throughout South America.

Redimec is a maintenance and systems development center headquartered in Tandil, near Buenos Aires. As a maintenance and repairs center, services a great variety of instruments and avionics. Growing to meet the growing number customer demands, Redimec also set up a branch at El Palomar Airport, near Buenos Aires City.

Ruben Blasco, manager of Redimec at El Palomar said, “Our growth since 1994 is due to excellent customer satisfaction, total quality management and good suppliers like Castleberry. Our technicians are at the center of customer satisfaction and they identify the needs of each customer, bringing the best solution to the program. We believe that instruments from Castleberry will allow us to expand those solutions.

“We are very pleased about this new international growth opportunity”, said Alex Hodge of Castleberry. “Castleberry believes that this agreement is of increased benefit to Latin American operators because it places our products in the hands of trusted aviation champions in the geographic regions they serve. Our customers should expect to see additional similar agreements to come.”

The popularity of Castleberry components includes a proven back up electric artificial horizon, air driven and electric directional gyros and horizons for fixed wing and helicopter operations as well as emergency power units and inverters for general aviation.

New Castleberry units are FAA approved and TSO'd as replacements for previously popular lines of components, including those previously manufactured by AIM, Century Flight and Bendix. Castleberry units fit the same panel cut out, use the same mating connectors and perform the same function as gyros of previous manufacturers. Installation of these units is straight forward.

The gyros manufactured by Castleberry embody a 50-year heritage of quality and reliability. Therefore, new Castleberry gyros for general aviation carry a 15-month warranty policy.

Castleberry Instruments and Avionics is an Austin, Texas manufacturer and repair facility of aircraft flight instruments and electronic components for the General Aviation and Corporate Aircraft industry. Repair and overhaul services of gyroscopic aircraft instruments is a specialty. With more than 30 years in the industry, the highly respected company produces FAA approved and TSO'd replacement products for many older, obsolete instruments no longer manufactured elsewhere.
