NEWS

FOR IMMEDIATE RELEASE:

Castleberry expands repair services for aircraft flight instruments bringing 30-year manufacturing skills and insight to General Aviation.

Austin, TX – June 1, 2007 -- With over 30 years in the aircraft instrument manufacturing industry, Castleberry Instruments & Avionics now adds instrument exchange program to its quality repair and overhaul services for a wide variety of aircraft electronics and other manufacturers' gyro flight instruments, including AIM, S-Tec, Collins, Honeywell, Century Flight, Bendix and others. Rotor inspection, repair and overhaul are highly regarded specialty services.

Repair services at Castleberry embody the same 50-year heritage of flight instrument manufacturing excellence begun by its predecessor, Aircraft Instrument Manufacturers (AIM) in Houston, TX in the 1950s. This commitment to excellence is guided today by a core of dedicated and highly skilled employees with an average of more than 20 years experience in manufacturing and repairing aircraft instruments.

Now leading the expanded exchange, repair and overhaul services at Castleberry is long-time service professional, John Semerjibashian. John has returned to Castleberry bringing 18 years of aviation services experience to the team. John's experience includes having worked for BFGoodrich Aerospace, Raytheon Aircraft, Matrix Aviation Mesa Airlines and GIS.

John Semerjibashian, Castleberry's Sales and Service Manager said, "Castleberry is service. It isn't just component service, but a sincere focus on customer service. It has always been

that way, and with the new changes in our business, you can expect more focus on service than ever before.”

Customers echo John’s comments. Many praise Castleberry for providing excellent service, fast turn-times and very knowledgeable help and support. They are happy to recommend Castleberry to anyone in need of good, fast service and a friendly staff.

“The company’s focus is on customers, for instruments and for service,” said Alex Hodge, Castleberry leader of operations, “if you count on instruments, count on Castleberry.”

Castleberry Instruments and Avionics is an Austin, Texas manufacturer and repair facility of aircraft flight instruments and electronic components for the General Aviation and Corporate Aircraft industry. Castleberry is an FAA approved aircraft instrument repair station for the general aviation and corporate aircraft industry. Repair and overhaul services of gyroscopic aircraft instruments is a specialty. With more than 30 years in the industry, the highly respected company also produces FAA approved and TSO’d replacement products for many older, obsolete instruments no longer manufactured elsewhere.
